

## Lab 2.1 - Node Check

To be sure that Node.js is installed and it is right version for this course, run the following command in the terminal:

```
node -v
```

This should output something like the following:

A screenshot of a terminal window with a dark background. The title bar at the top shows three colored window control buttons (red, yellow, green) and the text "1. bash". The terminal content shows a prompt "\$" followed by the command "node -v", which has been executed, resulting in the output "v12.16.3". A new prompt "\$" is visible on the next line, followed by a cursor.

As long as the first number (followed by "v") is 12, then the correct version of Node is installed for this course.
