

Lab 7.2 - Requiring a Module

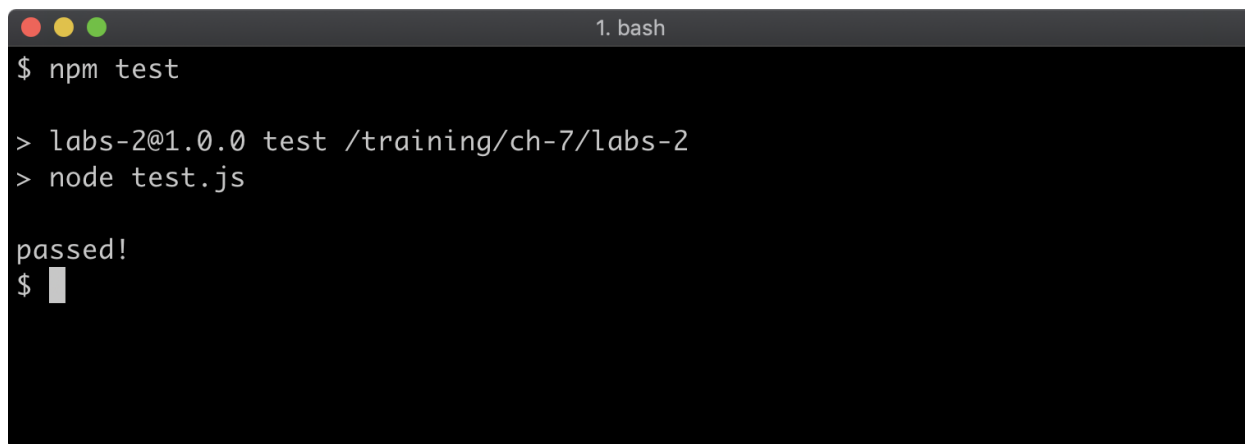

The labs-2 is a sibling to the labs-1. In the `index.js` file of labs-2, load the module that was created in the previous lab task and use that module to `console.log` the sum of 19 and 23.

When `index.js` is executed with `node` it should output 42:

A screenshot of a terminal window titled "1. bash". The prompt is "\$". The user enters "node index.js". The output is "42". The prompt is "\$" followed by a cursor.

```
1. bash
$ node index.js
42
$
```

Run `npm test` to check whether `index.js` was correctly implemented. If it was, the output should contain "`passed!`":

A terminal window titled "1. bash" with a dark background and light gray text. The window has three colored window control buttons (red, yellow, green) in the top-left corner. The text inside the terminal shows the execution of the 'npm test' command, which runs a test script for 'labs-2@1.0.0' in the directory '/training/ch-7/labs-2'. The test passes, and the prompt returns to the shell.

```
$ npm test

> labs-2@1.0.0 test /training/ch-7/labs-2
> node test.js

passed!
$
```
