Lab 6.1 - Install a Development Dependency

The labs-1 folder has a `package.json` file in it. Install `nonsynchronous` (https://www.npmjs.com/package/nonsynchronous) as a development dependency.

Run `npm test` in the labs-1 folder to check that the task has been completed:

```
● ● ●                          1. bash
$ npm test

> labs-1@1.0.0 test /training/ch-6/labs-1
> node test

passed
$
```

If the output says "`passed`" then the task was completed correctly.
